

Lawrence Livermore National Laboratory

# LLNL Select Agent Human Reliability Program

12/10/2008

**Eric Gard , Ph.D.**

Lawrence Livermore National Laboratory, P. O. Box 808, Livermore, CA 94551  
This work performed under the auspices of the U.S. Department of Energy by  
Lawrence Livermore National Laboratory under Contract DE-AC52-07NA27344

# Origins of the Select Agent Human Reliability Programs at LLNL and LANL

- The Department of Energy has a long history of working with nuclear materials.
  - The risks associated with these materials lead to a requirement for a human reliability program for those who work with high risk nuclear materials – Special Nuclear Materials (SNM)
  - As a result DOE has a well established Human Reliability Program (HRP) for nuclear materials.
- The Centers for Disease Control and Prevention (CDC) does not require a human reliability program for work with high risk biological materials – Select Agents (SA).
- However, based upon the similarities of high risk nuclear materials and high risk biological materials, LLNL and LANL have implemented a Select Agent Human Reliability Program (SAHRP).
- In 2003 a working group was convened to define a biosecurity program, which decided a SAHRP was necessary and what its requirements should be.
- In 2004 LLNL and LANL were instructed by the University of California, which managed both laboratories at the time, to implement a Select Agent Human Reliability Program.
- Since that time, both LLNL and LANL have had a SAHRP in place.

# DOE's Human Reliability Program (10 CFR 712)

- DOE's Human Reliability Program is defined in 10 CFR 712.
- HRP certification is required for people in positions that:
  - Afford access to category I special nuclear materials (SNM).
  - Involves nuclear explosive duties or has responsibility for working with, protecting, or transporting nuclear explosives, nuclear devices, or selected components.
  - Affords access to information concerning vulnerabilities in protective systems when transporting nuclear explosives, nuclear devices, selected components, or Category I quantities of SNM.
  - Affords the potential to significantly impact national security or cause unacceptable damage.

# Requirements for HRP Certification (10 CFR 712)

- The general requirements for HRP certification are:
  - A “Q” clearance.
  - Annual submission of the “Questionnaire for National Security Positions”.
  - Signed releases, acknowledgements, and waivers to participate in the HRP.
  - Completion of initial and annual HRP instruction.
  - Annual completion of a supervisory review, medical assessment, management evaluation, DOE personnel security review.
  - A psychological evaluation consisting of a generally accepted psychological assessment (test) and a semi-structured interview.
  - Initial drug & alcohol test and random drug & alcohol tests for use of illegal drugs and alcohol at least once each 12 months.
  - Successful completion of a counterintelligence evaluation, including a polygraph examination if required by the position.

# History of LLNL SAHRP Development

- UC managed laboratories established a Biosecurity Working Group to address the issue of security related to Select Agents in 2003.
  
- 50 Representatives from science and security from:
  - LLNL
  - LANL
  - BNL
  - UC
  - SNL
  - DOE HQ, Livermore and Albuquerque field offices
  
- The working group developed a set of recommendations including the requirement for a human reliability program.
  
- Each laboratory used these recommendation to determine if a SAHRP was necessary and, if so, what the elements of the SAHRP would be.

# Requirements for certification in the LLNL SAHRP.

- At LLNL SAHRP certification is required for people in positions that:
  - Afford unescorted access to Select Agents.
- From the working group conclusions LLNL established its' Select Agent Human Reliability Program (SAHRP) with the following elements:
  - DOJ Security Risk Assessment approval required.
  - Annual medical evaluation.
  - Annual psychological evaluation.
  - Annual credit check.
  - Annual criminal record check.
  - Resume Verification.
  - Initial and Random drug and alcohol testing (at least annually).
  - Signed releases, acknowledgements, and waivers to participate in the SAHRP.
  - Completion of initial and annual SAHRP instruction.

# Differences Between the LLNL SAHRP and the DOE HRP

- The LLNL SAHRP is patterned on the standard DOE Human Reliability Program (HRP)
- The LLNL SAHRP has the following distinctions from the HRP program:
  - A “Q” clearance is not required (the DOJ SRA approval is substituted).
  - No polygraph testing is required.
  - No written psychological evaluation (this is done annually in a semi-structured interview format).
  - DOE does not perform the annual personnel security review this is done by LLNL.
  - The SAHRP is not administered by DOE but is administered by the individual laboratories.
  - The SAHRP Certifying Official is the LLNL Laboratory Assurance Manager not a DOE employee.

# Lessons Learned & Concerns

- The SAHRP is a culture shock for biologists when coming to LLNL.
- The more restrictive the guidelines the harder it is to recruit.
- Instituting new “two person” requirements has a powerful economic impact on Select Agent operations.
- At smaller scale facilities like LLNL a “two person” requirement is also harder to implement due to smaller numbers of authorized people.
- The SAHRP is required for those with unescorted access to select agents; this is one mechanism to help mitigate the security risk of allowing researchers to work alone.
